

TO STUDY THE IMPORTANCE OF SELF RELIANT INDIA WITH SPECIAL REFERENCE TO HEALTH CARE MEASURE ADOPTED BY GOVERNMENT DURING COVID-19 AND ITS IMPACT ON GENERAL PEOPLE

□ Sabina Shaikh*

ABSTRACT

In the current situation of COVID-19 which we have been looking from March – 2020 and as this difficult circumstance is still on, and lion's share of the populace have been enduring this stage. Amidst it Indian Prime Minister (Mr. Narendra Modi) had tended to the country a few times to make a positive vibe or mentality among his nation individuals. In his paper we would zero in additional on the "Confident" India perspective wherein we can transform this undermined circumstance into a chance, our government has shown a lot of dedication to combat such disease, as appropriately said Indians have produced a decent measure of PPE units and other basic prerequisites for our regarded clinical group which was an extreme help also. An examination technique information with essential information assortment is given later in this paper wherein a "Survey Method" was conveyed among all age gatherings to comprehend the effect on current India and adolescents for their Future effects.

Keywords: Self reliant, Pandemic, Clinical, Covid -19.

INTRODUCTION

COVID-19 has familiar India to the way that homegrown trend-setters can grow great medical care arrangements at standard with worldwide contenders. In addition, these arrangements are generally adjusted for nearby conditions and are essentially more moderate.

Indian trend-setters felt a solid draw impact because of the need to satisfy a cross country interest for superior grade and moderate medical care arrangements traversing Diagnostics/Tests, Personnel Protective Equipment, Critical Care Equipment/Ventilators, Cold Storage for Transportation, and Recuperative/Assistive gadgets to battle the pandemic. This dire draw impact combined with the absence of worldwide supplies because of limitations and lockdowns, and deft activity by partners going from administrative specialists (ICMR and CDSCO), funding biological system (100 crore ACT Grants Fund), organizations (Invest India, Office of Principal

Scientific Adviser to the Government of India) and trend-setters (new companies, analysts) empowered a quick dispatch of items and administrations for use by residents. Truth be told, the record extension of the PPE fabricating industry in India, from practically non-existent nearby creation to now the world's second biggest maker, delivering in excess of 5 lakh PPEs each day, is an obvious sign of India's undiscovered potential.

PM Narendra Modi communicated that the greatest exercise from the flare-up of the worldwide pandemic, is that India should turn into a confident country. Surprisingly, his concept of 'self-reliant' isn't connected uniquely to the Indian economy opposite rest of the world. According to him, each district should act naturally dependent with regards to fundamentals of life – food, wellbeing, work, so the effect of emergency like COVID-19 can be relieved later on.

The launch of the 'self-reliant' mission may

*Asst. Professor, Dept. of Commerce, KHMW College, Jogeshwari

offer confirmation to many, however the inconspicuous truth is that the basic determinants of wellbeing, like clean water, disinfection, sustenance and climate keep on making detachment for a gigantic Indian populace.

As indicated by the National Health Policy, India had expected to build its wellbeing

While medical care request comes from all layers of the general public, the inventory side of health care coverage is overwhelmed by the private area which represents 80% of medical services accessibility in India. This has a monetary ramifications for lopsided stock of good medical care.

LITERATURE REVIEW

Prior to the announcement of —Self-reliant India by the Prime Minister, it had been more of the foreign brands which were ruled and preferred by the Indian customers, these brands were either imported or merely assembled out of imported components are those where value additions up to 80-95% are added outside the country. The technology-intensive value additions are performed outside the country, depriving the country of high tech value additions.

Our country has become the centre of mere assembly lines, wherein most of the technology-intensive activities, the key to the first equipment manufacturing, technology development, employment generation and core value additions within the downstream value chain of producing processes, are being shifted out of the country

India is therefore entrapped during a ferocious cycle of over-dependence on foreign capital inflows for bridging its growing deficits. we'd like to pursue the course of Swadeshi, via techno-nationalism for promoting homegrown technologies and launch of 'Made in India' products and makes including a preference for 'Swadeshi'.

Self-reliant means reliant on one's own powers and resources instead of those of others. The future aim is to form India self-sufficient in production of innumerable products and concentrate more on being —vocal for local also as on exports instead of the imports which might support the financial growth of our country. The global pandemic shows us the advantages of 'Be Indian and Buy Indian'. we've now become critically conscious of our own supply chain. we all know that counting on other countries for critical items will ultimately put you at their mercy. To avoid such adversity for ourselves, it's more important than ever that we become self-reliant and reduce our

dependence on other countries. The pandemic has taught the importance of local manufacturing, local market and native supply chain. Eg: On account of the strong sense of economic patriotism or Swadeshi, only 4% of foreign cars are sold in Japan. On the contrary, in India only 15% of cars sold are 'Made in India', while the remainder 85% are foreign brands assembled within the country During the COVID-19 crisis faced worldwide, world's expectations from India has increased, also all the sectors must clutch to the present opportunity and switch this worldwide trust it into advantage for the Indian markets. Also, it's been noted that India was successful in helping over 150 countries with medical requirements within the midst of this pandemic. To further enhance on this the necessity arises for —intent, inclusion, investment, infrastructure and innovation in order that self – reliant India are going to be realised by —Economy, Infrastructure, System, Demography and Demand". Requirement of —PPE kits for the frontline healthcare workers handling COVID-19 patients; were at elevated demand within two months of the outbreak wherein this lively disaster was converted into an interesting opportunity by the Indian markets within the short span of your time. As per the info collected by Ministry of Family and Health states that India now has 15.96 lakhs PPE kits and produces around 4.5 lakhs PPE kits per day and over 600 companies are certified PPE manufacturers. India was never into manufacturing medical textiles—including PPE kits, it had been completely owned by China.

This has brought us an entire printing operation of business to us which will be grown, sustained and exported. Ultimately a self-reliant India will stand on five pillars viz economy, which brings in quantum jump and not incremental change; infrastructure, which should become the identity of India; technology-driven system; vibrant demography; and demand.

OBJECTIVES

- 1) To comment on how health systems in India have responded to the COVID-19 pandemic with a particular focus on values.
- 2) To study the impact of Covid -19 on general health care
- 3) To study the perception of people towards efforts taken by government to combat the current pandemic
